

Tata Safari - ready reckoner

Oil lamp light on cluster

1. Blinking: **Yes** - check oil level after switching off the car and waiting for 10mins. This is a hardcoded service reminder which occurs every 15k kms (15k, 30k, 45k...). Can only be reset at the SC. Go at your convenience to get it reset. Drive on!
2. Blinking: **No** - low oil pressure / level, check for leaks and oil level as above. Do not drive if the oil level is too low. Switch off the car and refill before starting - visit the SC

Engine light

Usually always on - this can be due to many things:

1. Disconnect the battery negative terminal, press the horn a few times, reconnect and see if gone
 2. Check all wires around engine bay, especially near the battery and air filter box
 3. DPF clog: drive for 15-20kms in the 3rd gear, at 60kmph in sports mode. The light should clear
 4. Wait for some more time, and if it still doesn't go, visit the SC
-

DPF light

The actual DPF light - follow all points above, the light should go away. If not visit the SC.

Water in fuel filter - drain the fuel filter of excessive water, this can be done at SC. Most of the times the light goes away at restarts, but if it persists, SC.

Glow plugs - indicates that one or more glow plugs need replacement, a visit to the SC is required. These are covered in Warranty.

1. Spanner (only): service reminder and can be reset in the cluster options.
2. Car with spanner: issue detected, disconnect the battery negative terminal for 10mins and press the horn a few times, reconnect and check, this should go. Wait for some more time, drive on - if it persists, please visit the SC
